

Bridge standards for photovoltaic panels

Overview

This document identifies the important aspects of building design and construction to enable installation of solar photovoltaic and heating systems at some time after the building is constructed. Since the 2016 edition of NFPA 1, access pathways have been required on roofs to facilitate fire service access as well as egress. the Clean Energy States Alliance (CESA) as part of its Sustainable Solar Education Project. This document addresses photovoltaic (PV), solar hot water (ST), and solar ventilation preheat (SVP). The intent of this brief is to provide code-related information about photovoltaic systems to help ensure that what is proposed regarding the photovoltaic 'product' itself, including accessories such as inverters and controls, as well as their individual and collective installation can be verified. The following frequently asked questions and answers are a compendium of existing statutes, rules and National Electrical Code (NEC) provisions that are applicable to all electrical installations, with a special emphasis related to the installation of solar photovoltaic systems and energy storage.
