## System Topology

## Overview

---

While it is technically possible to connect solar panels directly to lights without batteries, it is not the most effective approach. Direct connections typically only provide power while the sun is shining, resulting in lights that won't function at night or during cloudy. A photovoltaic lighting system utilizes solar energy through photovoltaic panels to generate electricity for lighting purposes. These systems harness sunlight and convert it into usable electrical energy to power LED lamps, providing efficient and environmentally friendly lighting. Select appropriate light sources, 3. Integrate a charge controller for.
