

Canada energy storage transformation project

Overview

Description: This project will test a new way to design seismic surveys for carbon capture and storage measurement, monitoring and verification. The installed capacity of energy storage larger than 1 MW-and connected to the grid-in Canada may increase from 552 MW at the end of 2024 to 1,149 MW in 2030, based solely on 12 projects currently under construction 1. We focus exclusively on energy storage and speak for the entire industry because we represent the full value chain range of energy storage opportunities in our own markets and internationally. Energy Storage Canada. The development partnership behind Canada's largest operational BESS project has reached financial close on another grid-scale battery, bringing the 125 MW/500 MWh asset one step closer to commissioning. Oxford BESS is being developed by Boralex Inc. With a capacity of 300 MW / 1,200 MWh, Hagersville strengthens Ontario's electricity grid and supports the integration. Ottawa, February 3, 2026- On the heels of two years of modest numbers of new wind energy, solar energy and energy storage projects in Canada, the Canadian Renewable Energy Association (CanREA) expects 2026 to set a pace for steady growth that will continue into the next decade and beyond.
