

# Canadian Small Communication Base Station Battery

## Overview

---

This transformation reveals the core value of solid-state battery technology in Canada's communication infrastructure upgrade - when the capacity of traditional lithium batteries decays by more than 50% in extreme cold, solid-state batteries are reshaping the northern communication. This transformation reveals the core value of solid-state battery technology in Canada's communication infrastructure upgrade - when the capacity of traditional lithium batteries decays by more than 50% in extreme cold, solid-state batteries are reshaping the northern communication. In Nunavut, Canada, at 70 degrees north latitude, the communication base station in Resolute Bay was shut down three times a week due to extreme cold weather of -45°C, while the LAGP solid-state battery system deployed in 2024 has maintained a zero-interruption record for 18 months. This. Communication Base Station Battery by Application (Integrated Base Station, Distributed Base Station), by Types (Lithium Ion Battery, Lithium Iron Phosphate Battery, NiMH Battery, Others), by North America (United States, Canada, Mexico), by South America (Brazil, Argentina, Rest of South America). This work studies the optimization of battery resource configurations to cope with the duration uncertainty of base station interruption. Any battery slowly loses stored energy.

## Canadian Small Communication Base Station Battery
