

China battery energy storage system exporter

Overview

China's overhaul of its power market and the rapid expansion of AI-driven data centers are reshaping the global energy storage landscape, turning Chinese battery makers into dominant exporters worldwide. It is rechargeable batteries for use at a later date. When energy is needed, it is released from the BESS to power demand to lessen any integration of demand- and supply-side management. An augmented focus on energy storage development will substantially lower the curtailment rate of renewable. The surge is largely driven by AI data centres, which need fast-acting battery systems to provide backup power within milliseconds if the grid becomes unstable. China is the global leader in battery technology manufacturing and exports, and is benefiting from a worldwide boom. It is currently the largest single electrochemical storage facility in the country (Image: Ma Mingyan / China News Service / Alamy) In February 2025, China shelved a requirement that new domestic wind and solar projects be bundled with energy storage. Manufacturing concentration across Chinese facilities has created supply chain dynamics that reshape competitive landscapes worldwide. The nation more than quadrupled its battery fleet last year, which helped it surpass its 2025 target of 30 GW of operational capacity two years early. ESS News sat down with Ming-Xing Duan.
