

Does the base station outdoor cabinet consume a lot of power

Overview

Industry data shows that in some harsh environments, the cooling energy consumption of the cabinet can account for more than 40% of the overall operating costs of the base station. The gap between cooling and cost reduction seems like an insurmountable chasm. As the deployment of 5G base stations accelerates, millions of outdoor telecom cabinets are scattered across cities and rural areas. While bringing high-speed connectivity to people, the "temperature" management inside these cabinets, particularly the high energy consumption and maintenance costs. When designing an Outdoor Telecom Cabinet, many problems seen in the field are not caused by poor equipment quality-but by incorrect power system sizing. Common real-world issues include: the DC power supply system was not sized correctly from the beginning. This guide explains DC power sizing from. 5G base stations have transformed network infrastructure by demanding significantly more power than their 4G predecessors.
