

Eastern European all-vanadium flow battery

Overview

Europe's largest vanadium redox flow battery at Fraunhofer ICT in Pfinztal began controlled test operation on June 24, 2025, storing surplus wind and solar power. The system decouples capacity from power, enabling precise, on-demand grid integration. And this market is projected to grow annually by 13%. The battery has a power output of 2 MW and a. Our ES Flow batteries offer not only a sustainable solution, but also a highly efficient way of storing energy thanks to the innovative Redox Flow technology with vanadium. With a rated output of 8 kW, a peak output of 10 kW and an adjustable capacity ranging from 20 kWh or 40 kWh, our batteries. These systems store energy in liquid electrolytes containing vanadium ions in different oxidation states, allowing the battery to repeatedly charge and discharge with minimal degradation. As wind and solar power expand worldwide, grid operators face the challenge of balancing fluctuating. □ Summary □The vanadium flow battery energy storage demonstration project jointly deployed in Bulgaria by ZH Energy and its European partners has been successfully put into operation.
