

Europe cancels solar panel power generation

Overview

Solar panel installations in Europe have declined for the first time since 2016, raising fresh concerns about the continent's ability to meet its 2030 targets, according to SolarPower Europe. The boom years of EU solar in the 2020s have ended. In 2025, the sector contracted by 0.7%, falling from 1.7% in 2024. Brussels: The European Union's expansion of solar energy is on track for its first annual downturn in more than a decade, industry data showed on Thursday, as some governments reduce subsidies for rooftop solar panels. The trend reflects shifting political priorities in Europe as some member states. Last year, we warned policymakers with a yellow card that Europe's solar momentum would fade without decisive action. Reality has now confirmed those concerns, as already indicated in our mid-year market assessment. Solar is. The opening of a new solar panel factory in Dresden at the end of 2021 was seen as a small victory in the battle for market share from Chinese groups. Now Solarwatt is preparing to halt production at the plant and move that work to China," The Financial Times writes. It's the result of a decade-long industrial strategy designed to meet soaring global demand for.
