

# **Financing for bidirectional charging of smart photovoltaic energy storage containers**

## Overview

---

Financing energy storage projects is critical for enabling renewable energy adoption and grid stability. Managed EV charging is an adaptive means of charging EVs which considers both vehicle energy needs and control objectives, typically designed to provide grid support or mitigate the impacts of EV charging. Large scale deployment of this technology is hampered by perceived financial risks and lack of secured financial models. Innovative financial models can encourage both project developers and. Bidirectional charging has significant potential in transforming how consumers view and use their electric vehicles (EVs). Bidirectional charging allows EVs to become a flexible resource for power systems that act as both a flexible load and an energy resource, which creates new revenue and grid. In April 2023 the California Public Utilities Commission adopted the Net Billing Tariff (NBT) replacing the NEM2 rate structure governing net energy metering for distributed generation.
