Overview

In this paper, the flow characteristics around the solar photovoltaic array are numerically simulated by the CFD method, and the influence of panel array arrangement on the wind resistance of floating solar photovoltaic array is studied. Are photovoltaic power generation systems vulnerable to wind loads?

(1) Background: As environmental. This paper conducts a detailed technical analysis of the integration of solar and wind energy into Nigeria's 330 kV power grid. Given the country's substantial wind and solar energy potential, this study examines the impact of incorporating these renewable sources on grid stability and active power loss. The results indicate that Kano exhibits the lowest economic performance indices, with a net present cost (NPC) of USD 32,212.52 and a cost of energy (COE) of USD 0.6072/kWh, followed by Anambra (NPC: USD. Microgrids, as localized power distribution systems, offer a promising solution to the challenges posed by unreliable.
