

# Georgia Flow Battery

## Overview

---

Georgia-based electric cooperative Snapping Shoals EMC and Stryten Energy are partnering on a pilot project to demonstrate the latter's vanadium redox flow battery (VRFB) for long-duration energy storage. Electrolytes flow through electrochemical cells from storage tanks in this rechargeable battery. The existing flow battery technologies cost more than \$200/kilowatt hour and are too expensive for practical application, but Liu's lab in the School of Chemical and Biomolecular Engineering (ChBE). IEEE Spectrum is the flagship publication of the IEEE - the world's largest professional organization devoted to engineering and applied sciences. Our articles, videos, and infographics inform our readers about developments in technology, engineering, and science. Create an account to access more. The Stryten Energy and Largo joint venture will deliver price-competitive vanadium electrolyte via a unique leasing model to drive rapid commercialization and adoption of Vanadium Redox Flow Batteries Alpharetta, Ga. , February 4, 2025 -Stryten Energy LLC, a U. -based energy storage solutions. A new flow battery is just the latest sign that Georgia is gearing up to leading the energy transition, ESG or no ESG. Flow batteries almost sound too good to be true, but they are true. In a proof-of-concept zinc-iodide battery, the reactor part achieved 306. 1W/litre discharge and charging at 1,322W/litre.

## Georgia Flow Battery
