

# Greek wind power system

## Overview

---

In Greece, the current momentum is anchored in the National Energy and Climate Plan, which aims to achieve 9.5 GW, while the remaining will be covered by onshore wind. Regarding onshore wind, a mean annual installation rate of 250-300 MW per year is needed, which is comparable to the average rate of new installations achieved in the last. Greece is entering a pivotal decade for clean energy, with wind power poised to play a leading role in meeting ambitious 2030 targets. Under its revised National Energy and Climate Plan, Athens is now aiming for 82% of electricity to come from renewables by 2030, a significant jump from the. Due to its geographical position and shape, Greece has a varied high wind and solar potential (especially at the eastern part of the country), and the western part has a significant hydro potential (mainly at the west) that is already being exploited. The utilization of intermittent RES (wind and solar). The Greece Wind Energy Market Report is Segmented by Location (Onshore and Offshore), Turbine Capacity (Less Than 3 MW, 3 To 6 MW, and Above 6 MW), and Application (Utility-Scale, Commercial and Industrial, and Community Projects). Current capacity and growth: As. neural networks (ANN). The SARIMA prediction model is contrasted with the ANN approach. The suggested ANN for wind power plants has a mean average prediction error (MAPE) of 3%-4.
