

# High-power communication base station power generation

## Overview

---

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. Can a 500W switch power supply be used for communication. Today, as the market migrates from 4G to 5G network solutions, the cellular communications industry is laying the groundwork for a giant leap forward in data transfer speed, lower latency, capacity, user density, and reliability.
