

How long can a photovoltaic grid-connected inverter last

Overview

According to the International Energy Agency (2024), Industry data and the Global Market Outlook by SolarPower Europe, an inverter can function for 10 years or more. Advanced inverters can survive for as long as 25 years. Real-world life usually varies significantly from the stated warranty and. Panels can reliably produce power for 25-30 years, but inverters work harder, handle more stress, and naturally have a shorter lifespan. String inverters, microinverters, and string inverters paired with DC optimizers all have their own expected lifespans. Solar inverters last between 10 to 25 years depending on the type, with string inverters averaging 10 to 15 years and microinverters reaching 20 to 25 years. This makes the inverter the most likely component in the entire solar array to require replacement during the. A realistic lifespan depends on the inverter type, installation quality, and the system's daily operating load.
