

# How many degrees of radiation does the photovoltaic panel emit

## Overview

---

Average annual solar radiation arriving at the top of the Earth's atmosphere is roughly 1361 W/m. The Sun's rays are as they pass through the , leaving maximum normal surface irradiance at approximately 1000 W/m at on a clear day. When 1361 W/m is arriving above the atmosphere (when the Sun is at the in a cloudless sky), direct sun is about 1050 W/m , and global radiation on a horizontal surface at ground level is about 1120 W/m. The latter figure includes radiatio.
