

India builds solar power station

Overview

Slated to be the world's largest hybrid renewable energy park, it is being built on 72,600 hectares (179,000 acres) of waste land. It is expected to generate 30 gigawatts (GW) from solar panels and wind turbines, enough to power 18 million Indian homes. India's solar power has grown nearly 20 times since December 2015, at an average growth rate of 40% per year. As of 2025, it is now India's third largest source of electricity behind hydro. This graph charts India's solar power growth relative to the equivalent total electricity demand of other. Construction is underway in western India on what billionaire-led Adani Group says will be India's largest battery energy storage system. Full completion was targeted by March. Solar power projects can be set up anywhere in the country, however the solar power projects developed in scattered manner leads to higher project cost per MW and higher transmission losses.
