

# Is a rooftop signal base station considered energy storage

## Overview

---

A typical base station energy storage system consists of lithium battery banks, an intelligent management system, power conversion equipment, and power distribution units. In 2011, California adopted a Renewable Portfolio Standard (RPS) requiring that at least one-third of the state's electricity come from clean energy sources by 2020. The California RPS program was established in 2002 by Senate Bill (SB) 1078 (Sher, 2002) with the initial requirement that 20% of rooftop solar and battery energy storage be a barrier to adoption?

Even with the benefits of rooftop solar and battery energy storage, the upfront cost of these systems is still a barrier to adoption. This is a new aspect of building operations that a growing number of jurisdictions will need to address. The TIA was processed by the Technical Committee on Energy Storage Systems, and was issued by the Standards Council on August 25, 2023, with an effective date of September 1, 2023. All systems located on rooftops shall comply with all of it.
