

Mold photovoltaic panel

Overview

Mold growth is typically triggered by a combination of moisture and limited sunlight, conditions frequently found under solar panels. Understanding the reasons behind this phenomenon is crucial for any homeowner looking to maximize their investment in solar energy. The presence of mold under solar panels is a common yet often overlooked issue. The mold, mildew, and other fungi can spread quickly, blocking the sun's rays and reducing energy efficiency. Not only does it ensure that your panels are operating at peak performance, but it also helps prevent the buildup of mould, which can significantly reduce their effectiveness. Our Solar Rotational Molding (SRM®) factories are complete systems - just add molds and plastic.
