

Photovoltaic bracket bolt tightening

Overview

Bolt brackets: Hand-tighten lag bolts first. Torque down: Crank to 35-55 ft-lbs (check manufacturer specs!). Critical: Missing the rafter reduces strength by 80%. When it comes to solar mounting systems, setting the correct bolt torque is crucial. Though it might seem like a minor detail, it plays a significant role in the safety and durability of your solar installations. The recommended torque settings can vary based on factors such as bolt size, material, the. Please refer to the below chart for the appropriate torque specs. *Photos shown are for representative purposes only. Ordinary fasteners are prone to corrosion and loosening, leading to structural safety hazards.
