## Overview

---

The photovoltaic (PV) combiner box can also be called a solar combiner box or array combiner box. It is a key electrical device on the DC side of the photovoltaic power generation system. ABB offers a plug & play solution that accommodates overcurrent protection devices, disconnectors and surge protective. Solar panels are wired in groups called strings. Each string produces DC (direct current) electricity. But you can't just let dozens of strings run wild into your inverter - you need a central point where they all come together in a safe, organized way. This device plays a significant role in both residential and commercial solar installations, particularly when. Many photovoltaic (PV) systems suffer from unstable output, frequent faults, or even complete shutdowns-not because of solar panels or inverters, but due to an overlooked component: the solar combiner box.
