

Photovoltaic panel 500w parameters

Overview

At the heart of a 500-watt solar panel lies its wattage rating, which indicates its peak power output under Standard Test Conditions (STC). These conditions represent optimal testing scenarios, involving 1,000 lumens/m² of light intensity and a temperature of 77°F (25°C). Example: 5kW solar system is comprised of 50 100-watt solar panels. Alright, your roof square footage is 1000 sq ft. Can you put a 5kW solar system on your roof?

For that, you will need to know what size is a typical 100-watt solar panel, right?

To bridge that gap of very useful knowledge needed. A 500W panel is one of the larger options available on the market today, capable of producing half a kilowatt of power under ideal sunlight. IP68 junction box long-term weather endurance. High efficiency solar cell to keep the modules efficiency reach to 21. Positive tolerance to ensure higher output. Excellent performance.
