

# Photovoltaic panels bent after installation

## Overview

---

If you suspect solar panel damage, the first thing to do is contact the installation company or another qualified solar energy system repair outfit. The technician can accurately evaluate the type of damage and the extent of the problem. About two years ago I started a DIY project to install some solar panels on my roof. The installation is permitted and I followed all the installation instructions, but I've been noticing bending on the panels, specially after a snow we. Recently got solar panels installed through one of the big name companies. If you notice any issues with your system, take quick action to prevent them from getting worse. A visual inspection may reveal broken or cracked glass, a problem with the frame or mounting or damaged or disconnected wiring issues.
