

Photovoltaic panels use cold light sources to generate electricity

Overview

They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. Here's a step-by-step breakdown of how they function: 1. Absorption of Sunlight Solar panels are made up of solar cells, typically composed of silicon. When sunlight (photons) hits the solar cells, it. The photovoltaic effect is nature's way of converting light into electrical energy, and solar cells are our ingenious method of capturing and utilizing this natural phenomenon.
