

Photovoltaic support column diagonal support connection

Overview

The diagonal cables are anchored to the concrete foundations and connected to the top of the support columns. In the event of a conflict between this manual and any code, the installer shall contact Solar Foundations USA® supplied/specified. That's where flexible photovoltaic support column installation diagrams come charging in like a yoga master, bending over backward to maximize energy harvest. The photovoltaic support structure must be firm and reliable and can withstand such external effects as atmospheric erosion, wind load and so on. The strength of the material must be resistant to climatic conditions.
