

Power generation for civil solar energy

Overview

There are two main types of solar energy technologies-photovoltaics (PV) and concentrating solar-thermal power (CSP). A key element of LADWP's renewable energy program is the development of local solar, particularly customer based programs that tap into the city's abundant sunshine and provide residents and businesses with the ability to generate their own power. However, solar energy dominated RE capacity expansion, surging by 192 GW (+22%) in 2022. 'Light' is utilized to convert energy. By installing solar panels, you can generate your own clean, renewable energy, reducing your reliance on the grid and lowering your electricity bills.
