

Principle of Photovoltaic Panel Voltage Withstand Test

Overview

IEC 61730-2 High Voltage Withstand Testing is a standard procedure that evaluates the electrical insulation integrity of photovoltaic modules by applying high voltage across their insulating materials. Why is this testing important?

Dielectric Withstand Test (DCW)

The DCW test verifies that the PV module's

insulation is strong enough to resist high voltage without breakdown, arcing, or leakage. This is

[Principle of Photovoltaic Panel Voltage Withstand Test](#)

The objective of the dielectric voltage withstand test is to establish the minimum level of electrical insulation necessary to prevent human contact with a potentially harmful voltage and resulting current.
