

# Principle of energy storage lithium battery protection board

## Overview

---

The protection board consists of electronic circuits. It can accurately monitor the cell voltage and charge/discharge circuit current under the environment of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Control the current circuit on and off; PTC can prevent serious damage to the battery in a high. This is where the lithium battery protection board-often referred to as a PCM (Protection Circuit Module) or part of a Battery Management System (BMS)-plays a crucial safety, stability, and longevity role. It ensures battery packs operate safely, efficiently, and durably.
