

Rooftop solar power generation direction

Overview

For maximum output, the sweet spot for solar panels in the continental U. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy. Whether you're planning a new installation or optimizing an existing system, understanding solar panel direction and orientation is crucial for maximizing your system's efficiency in 2025. This comprehensive guide will walk you through everything you need to know about positioning your solar panels. While not optimally positioned, the East-West orientation can allow for the installation of more panels in the same area. Let's start with the fundamental question: how much less power do east-west systems actually produce compared to south-facing arrays?

Panels on roofs that face 20% east will. We use Google Earth imagery to analyze your roof shape and local weather patterns to create a personalized solar plan.
