

**Solar container lithium battery pack has a problem that the more you charge the less battery life**

## Overview

---

These signs follow low voltage cutoff after a deep drain, an overcurrent event, cold or hot cell temperatures, or a fault that the BMS reports during its own checks. Power down loads and isolate the battery. The sections below address common LiFePO4 battery problems and show how to restore stable operation with simple checks and settings for your lithium battery system. Charging stalls for predictable reasons. Check temperature. Regularly inspect lithium battery packs for signs like swelling, low voltage, or overheating to catch problems early and keep them safe. Use simple tests such as visual checks, connection inspections, and voltage measurements to troubleshoot battery issues before they worsen.
