

Solar panels tile roof under the solar panels

Overview

Short Answer: Yes, you can install solar panels on tile roofs, but the process requires specialized knowledge and equipment to ensure proper installation and avoid damage to the roof. With the right equipment, proper planning, and professional installation, your tile roof can easily support a robust solar energy system. Installation Method Selection is Critical: The three primary installation methods (tile hooks, comp-out, and tile replacement mounts) each serve different scenarios. The primary challenge is securing the heavy solar array to the underlying roof structure. Tile roofs, while aesthetically pleasing and durable, present unique challenges during solar panel installation. Without proper techniques and care, there's a risk of damaging the tiles, leading to potential leaks and costly repairs.
