

Solar photovoltaic panels have black spots

Overview

If you see dark spots on your panels, this could be a sign that your panels are undergoing delamination, and you should contact your installer for an inspection. Micro cracks are tiny tears in solar cells stemming from haphazard shipping and installation or defects in manufacturing. Weather-related solar panel damage is also on the rise. In the event photovoltaic solar energy systems turn black, it indicates an issue with the panels or their performance; it is crucial to assess conditions such as 1. shading effects from nearby structures, and 4. However, like any technology, they are susceptible to issues affecting performance. Solar panels are generally low-maintenance, but.
