

# Solar power generation trip

## Overview

---

Whether you're dreaming of a self-sufficient cabin in the woods, planning to power your RV for a long road trip, or simply want to break free from the traditional power grid, building your own off-grid solar system can be an exciting and rewarding project. Some utilities have utilized DTT to provide an additional layer of protection against unintentional islanding and potential distribution systems. The equipment is often prohibitively expensive and many solar project developers have had to withdraw projects as a result. Costs. The solar trade group Coalition for Community Solar Access reports that a utility requirement to use "direct transfer trip" often makes solar projects uneconomical, while both CCSA and the renewable energy research group IREC find that the hazards targeted by direct transfer trip can be met. This study evaluates the various utility justifications for requiring direct transfer trip (DTT) and outlines a suite of alternative grid protection strategies that can effectively address grid safety and reliability concerns for inverter DERs. Qualifying technologies include wind.
