

# The principle of automatic storage battery loading into the container

## Overview

---

Modern automatic BESS assembly lines integrate 21 sequential operations from initial cell loading through final pack validation in what industry experts term a "cell-to-container solution". Summary □ AGV-Driven Battery Cluster Robotic Loading System is an intelligent automation solution designed for large-scale integration, efficient loading and safe transportation of energy storage systems. Through high-precision visual positioning, adaptive loading platform, AI loading algorithm and. Manufacturing a Battery Energy Storage System (BESS) is not a single-step process-it is a layered, multi-stage production journey that begins at the individual cell level and culminates in a fully containerized, grid-ready energy storage unit. Automatic Operation: Our Equipment has the automatic positioning function. Supports AGV automatic docking with double-layer racks (each rack carries 2 PACKs), featuring 5-station 3D scheduling (loading, standby, empty rack, discharging, emergency manual operation). Using RFID + QR code dual binding for precise material traceability.
