Overview

Researchers at Oak Ridge National Laboratory have performed advanced hydrodynamic modeling and developed chemical models to assess the feasibility of converting abandoned coal mines into underground pumped storage hydropower (PSH) facilities that could provide energy storage. Researchers at Oak Ridge National Laboratory have performed advanced hydrodynamic modeling and developed chemical models to assess the feasibility of converting abandoned coal mines into underground pumped storage hydropower (PSH) facilities that could provide energy storage. Researchers at Oak Ridge National Laboratory have performed advanced hydrodynamic modeling and developed chemical models to assess the feasibility of converting abandoned coal mines into underground pumped storage hydropower (PSH) facilities that could provide energy storage to increase grid. Researchers at Oak Ridge National Laboratory (ORNL) have successfully developed advanced modeling tools that could transform the nation's thousands of abandoned coal mines into massive underground reservoirs for energy storage. By creating high-fidelity hydrodynamic and chemical models, the team. Renewables are cheaper and more available than ever. Repurposing old mine shafts into gravity batteries is more than just a clever use of existing infrastructure --it's a promising new model for energy storage that combines modern. Led by Chao Lyu from the College of Energy and Mining Engineering at Xi'an University of Science and Technology, a new. In the context of sustainable development, revitalising the coal sector is a key challenge.
