

USA evaluates solar power generation

Overview

Our annual Year in Review report includes a 10-year outlook for every segment. We expect cumulative US solar capacity to nearly triple from 279 GWdc installed at year-end 2025 to 769 GWdc installed by 2036, with average annual capacity additions of more than 44 GWdc. In August 2024, utility-scale generation of solar electricity averaged 63.1 gigawatthours between 10:00 a.m. and 4:00 p.m. The US solar industry installed 43.1 GWdc in 2024. Revised tax credit timelines and safe harbor dynamics reduced the imperative to interconnect by 2025. Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. This comprehensive report is part of IEA PVPS Task 1, which aims to promote and facilitate the exchange of information on the technical, economic, and social aspects of PV power systems.
