

# What are the independent energy storage power stations in Gambia

## Overview

---

The project will consist of three components: (1) a grid-connected photovoltaic (PV) power plant with a total installed capacity of 10 MW including an associated battery energy storage station (BESS), (2) a number of off-grid PV and BESS units for rural health clinics. The project will consist of three components: (1) a grid-connected photovoltaic (PV) power plant with a total installed capacity of 10 MW including an associated battery energy storage station (BESS), (2) a number of off-grid PV and BESS units for rural health clinics. Gambian utility Nawec is seeking proposals for a 50 MW PV facility planned to be deployed in Soma, south of the River Gambia. The project is part of a broader solar project eventually including unspecified battery storage capacity. Gambia's Ministry of Petroleum and Energy (MoPE) and state-owned Gambia's Ministry of Petroleum and Energy and utility National Water and Electricity Company (Nawec) have invited independent power producer (IPP) developers to submit a request for qualification (RFQ) for the first stage of the Soma solar-storage project. On completion, the plant would not only be. Enter the Banjul Power Plant Energy Storage initiative-a game-changer for Gambia's energy resilience. This project isn't just about storing electrons; it's about safeguarding hospitals, schools, and businesses from blackouts that cost West African economies up to 2% of GDP annually.
