Overview

Reviewing the top ten states for solar generation and capacity, energy storage buildout, and more. This report provides a comprehensive breakdown of the current U. S. 2 gigawatts direct current (GWdc) of capacity in 2025, a 14% decrease from 2024. The utility-scale sector shrank nearly 40% quarter-over-quarter in the fourth quarter. Revised tax credit timelines and safe harbor dynamics reduced the imperative to interconnect by. The International Renewable Energy Agency (IRENA) reports that, between 2010 and 2023, the global weighted average levelized cost of energy of concentrating solar power (CSP) fell from \$0. The chart has 1 Y axis displaying Capacity (MW). Energy Information Administration (EIA).
