

# What battery should I use for 100v solar panels

## Overview

---

To effectively use a 100-watt solar panel, aim for a battery capacity that's approximately 50% greater than your daily energy needs. For lead-acid batteries, you should consider a size of about 100 amp-hours (Ah). For lithium-ion, sizes between 50 Ah and 100 Ah are. Daily Energy Generation: A 100-watt solar panel can produce up to 500 watt-hours daily with 5 hours of sunlight; understanding this helps in battery sizing. Battery Capacity Requirements: Opt for a battery with at least 100 amp-hours (Ah) for optimal performance with a 100-watt solar panel. Contrary to what manufacturers claim about solar batteries, my hands-on testing showed that not all batteries are equal when paired with a 100-watt panel. I found that some struggle to handle continuous power flow or don't deliver consistent performance in varying sunlight. After hands-on testing, I found that the 12. 100ah is equal to 1200 watts so it is sufficient.
