Apart from the mainstream steady-state requirements, the transient performances of nadir of frequency (NoF) and the rate of change of frequency (RoCoF) exhibit more practical significance.

### Community Microgrid Technical Best Practices Guide

Similarly, microgrid frequency is regulated using two frequency droop settings: 1) a nominal frequency setpoint (60Hz), and 2) a percentage of Nameplate Real Power capacity that will be dispatched in

### Microgrid Frequency Control

A key component of the overall frequency control strategy is one which allows a broader frequency operating range and hence allows for the
