

What is the highest ultraviolet radiation

Overview

The highest UVI ever recorded on Earth was an astonishing 43. The Ultraviolet Index (UVI) is the international standard measure for the strength of solar ultraviolet radiation reaching the Earth's surface. While daily UVI forecasts are common, the scale. During peak hours, the UV Index can reach levels as high as 11, making it essential to stay informed and shield yourself accordingly. Learn more about how the UV Index can be calculated and analyzed and access the UV Index for your location on EPA's. UV levels in the Northern Hemisphere follow a predictable seasonal pattern, with highest intensity from May to August. Countries near the equator (such as Mexico, northern Africa, and Southeast Asia) experience consistently high UV levels year-round. It is primarily used in daily and hourly forecasts aimed at the general public.
