

What to do if photovoltaic panels have a 20-year warranty

Overview

Traditionally, these warranties typically last 10-15 years, although it is becoming more common for premium panels to have 20 and 25 year product warranties. Solar panel protection comes in two levels: manufacturer warranties covering product defects and energy output, including degradation, and installer warranties covering workmanship and installation quality. Equipment warranties can insulate you. A standard solar panel warranty should come with at least 10 years of protection, though many premium options now offer 25 or even 30+ years of coverage. This guide breaks down everything you need to understand about solar panel warranties in 2026: the three types of coverage, what each one actually protects, warranty lengths by brand, what can void your warranty, how degradation guarantees work, and exactly how to file a claim if something goes. The length of a product warranty varies based on the manufacturer and model.
